Sterling Data Center
CANBERRA, AUSTRALIA

Canberra •

With Verizon Data Centers, you retain the flexibility to administer and access your own equipment and applications, without the complications and expense of running your own data center.

Our Colocation services offer controlled and managed data center space with diverse connectivity options to house computing, storage, network, and application server equipment.

Open racks, cabinets, or customized caged floor spaces are available across a global footprint of hardened and secure facilities designed to maintain uptime and availability.

Floor Loading	1,224 kg./sq. m.
Raised Floor Height	1 m.

POWER	
Generator Resiliency	N+1
UPS Resiliency	N+1
Power SLA	100% availability
Fuel Reserve Period	2 days

SECURITY

Verizon facilities have security guards on site 24x7. Closed-circuit surveillance cameras have been installed on the interior and exterior of the buildings, as well as covering each colocation floor of the facilities. Video from these cameras is monitored locally and digitally recorded to disk for later review.

Our data centers are monitored around the clock by operations staff. Electronic key readers have been installed on every entrance to the facilities. Every cabinet in the data center is locked and access is controlled by on-site security guards and our key management system.

Data center customers wishing to access their servers must present valid identification (e.g., driver's license) to the security guards at the facility. Once their identity and access authority have been confirmed, the customer will be given the key to their rack and unescorted access into the colocation section of the facility.
